

Release Notes — What's New

Everything added since v3.0.1, up to the current v3.00.006. Generated 6/10/2026.

v3.00.006

2026-06-10

- **Account Transactions page**

New screen listing every posted account transaction from the Account Transaction Summary View. Includes a search box, filters (transaction type, currency, account number, order number, date range), per-currency Credit / Debit / Net totals, and a one-click PDF export of the filtered list.

- **Quick "Pay" on the order list**

A Pay button on each order row opens a compact payment dialog (method, amount, currency, date, notes) that records the payment and automatically recomputes the order's payment status and collected totals — the same effect as the order form's Payments section, without opening the full order.

v3.00.005

2026-06-09

- **Accounting entries on order close**

When an order is marked Closed, every line — delivery packages, services, local items, external retail invoice references, and the delivery fee — is posted to the account_transactions ledger. Each row carries the order number and the customer's account number, and amounts are recorded in their own currency.

Account numbers, order totals, vehicles & general customer

2026-06-09

- **Smart account numbers**

Customers, suppliers, partners, drivers and vehicles get auto-generated, unique 12-digit account numbers with a 2-digit category prefix (customer 42, supplier 34, partner 60, driver 40, vehicle 58), displayed grouped like a card number. Duplicates are detected and re-issued automatically.

- **Complete order totals, multi-currency**

The order total now sums items + packages + services + external retail invoices + delivery fee, grouped by currency. The Delivery Packages section is always available on the order form.

- **Default customer & more**

New orders default the customer to "GENERAL CUSTOMER". Added a Vehicles management page, an Order Services sub-form, and phone/mobile input helpers.

v3.00.004

2026-06-08

- **Retail invoices & customer mobile app**

Retail goods invoices, supplier business types, and the customer-facing mobile app experience (registration, login and account view).

v3.0.1

2026-06-04

- **Initial release**

Core delivery & logistics management: orders, drivers, live tracking, contacts (customers / suppliers / partners), products, purchase invoices, reports, dashboard, and user accounts with secure sign-in.

Backend: delivered with Supabase migrations (fix17–fix39) adding user accounts, contact account numbers, order services, the account_transactions ledger and its summary view, plus the required access policies.
