Delivery & Logistics Management — Desktop Application

User Manual

31 May 2026 • Version 3.0.0

Contents

1. Getting started & signing in
2. Getting around the app
3. Adding a customer
4. Creating a delivery order
5. Assigning a driver
6. Recording payments & collection
7. Order status & delivery status
8. Closing an order
9. Finding & filtering orders
10. Viewing pending amounts

1. Getting started & signing in

1. Open the **iDeliver III** application.
2. On the login screen, enter your **username, email, or mobile number** and your **password**.
3. Click **Sign in**.

Your session stays active for up to 12 hours, after which you will be asked to sign in again. Everything you create or change is recorded under your user account.

2. Getting around the app

Use the sidebar on the left to move between sections:

- **Dashboard** — overview.
- **Orders** — create and manage delivery orders (the main workspace).
- **Drivers** — your delivery drivers.
- **Tracking, Reports, Products, Purchases, Company.**
- **Contacts** — Customers, Suppliers and Partners.

3. Adding a customer

You can add customers from the Contacts area, or on the fly while creating an order (see step 4).

1. Open **Contacts** → **Customers**.
2. Click **Add Customer**.

3. The **Account Number** is generated automatically (a 12-digit number) — you don't type it.
4. Fill in **First Name**, **Last Name** and **Mobile** (required). Optionally add WhatsApp, email, city and address.
5. Click **Add Customer** to save.

The new customer's account number then appears in the form and in the customers list.

4. Creating a delivery order

1. Open **Orders** and click **New Order**.
2. **Choose the customer.** In the Customer box, start typing a name:
 - Pick a match from the drop-down list that appears, or click the **search** button to browse all customers.
 - If the name is new, a hint appears: *"It seems this is a new customer — do you want to save?"* Click it to open a quick **New Customer** form (already filled with the name). Complete it and save — the order's customer fields fill in automatically.
3. Check the **Recipient Name**, **Mobile** and **WhatsApp** (auto-filled from the customer; edit if needed).
4. Enter the **Route**: pickup / origin and the delivery address.
5. Set the **Schedule**: date, pickup time and delivery time. Use the **-1h** **-10** **+10** **+1h** buttons to adjust times quickly.
6. Under **Assignment & Status**, choose a Driver and the Order Status / Delivery Status (see step 7).
7. Add **Retail Items**: click **Add Item**, then choose the product and set quantity, unit price, currency and any discount. Line totals are calculated for you.
8. Set **Delivery & Totals**: delivery fee, fee currency, discount and VAT. The app shows totals per currency.
9. Add any **Payments** already received (see step 6) and **Notes** if needed.
10. Click **Create Order**.

To change an existing order later, click the **edit (pencil)** icon on its row, make your changes, and click **Save Changes**.

5. Assigning a driver

There are two ways:

Inside the order form

1. Open or create the order.
2. Under **Assignment & Status**, pick a driver from the **Driver** list and save.

Quickly from the orders list

1. In the Orders list, click the small **truck** button next to the driver name on a row.
2. A small popup opens with a **search box** and the list of drivers.
3. Type to search if needed, then click a driver — it is assigned immediately and the popup closes.

You can re-assign the driver as many times as you like — until the order is closed.

6. Recording payments & collection

1. In the order form, go to the **Payments** section and click **Add Payment**.
2. For each payment, set the **method**, **amount**, **currency** (USD or LBP), **date** and optional **notes**. Add as many payments as needed; remove one with the trash icon.
3. The **Payment Summary** shows, for each currency, the **Total Order**, **Total Paid** and **Total Pending**.

Based on the payments, the app automatically shows the collection state:

Situation	Shown as
Nothing collected yet	Money is due / Unpaid
Some, but less than the total	Money partially collected / Partial
Total fully covered	Money fully collected / Paid

7. Order status & delivery status

Each order has two independent statuses:

Order Status (lifecycle)	Delivery Status (the goods)
Scheduled → Confirmed → In Progress → Completed	Awaiting Pickup → Picked Up → In Transit → Delivered

You can set both inside the order form. To change the **Order Status** quickly from the list:

1. Click the **status badge** on the order's row.
2. A small menu appears with the four options — click the one you want. It updates immediately.

8. Closing an order

Closing finalizes an order and locks it.

1. Open the order (edit). The **Mark Closed** button is at the bottom-left.
2. It becomes available **only** when all three are true:
 - the order is **fully paid** (no pending dues),
 - Order Status is **Completed**, and
 - Delivery Status is **Delivered**.

Until then it stays greyed out, and hovering shows what is still missing.

3. Click **Mark Closed** to close the order.

Once closed, an order is **locked**: it cannot be edited, cancelled or deleted, and the quick driver/status actions are disabled. It is shown with a "Closed" mark in the list.

9. Finding & filtering orders

1. Use the **search box** to find by order number, recipient, mobile or address.
2. Use the **status buttons** to show only orders of a given status.
3. Use the filter row to narrow by **Driver**, **Customer**, and **Scheduled date**:
 - Set only the first date for a single day.
 - Set both dates for a range (between two dates).
4. Click **Clear** to reset these filters.

10. Viewing pending amounts

1. Apply any filters you want (driver, customer, dates, status) so the list shows the orders you care about.
2. Click **Display Pending**.
3. A popup shows, for each currency, the **Total Orders**, **Total Paid** and **Total Pending** across the filtered orders, plus how many orders are included.

Because it follows your filters, you can see pendings for a single driver, a single customer, or a specific date range.

iDeliver III — User Manual. Describes the order, customer, payment and collection workflows available as of 31 May 2026. Generated automatically from the application project.
