1. Parties & Preamble

This Software Scope & Service Agreement (the “**Agreement**”) is entered into as of the Effective Date, **01 June 2026**, as stated on the cover page, by and between:

The Client (“3asari3”)	3asari3, represented by Elie Khoury , Owner — the party for whom the Software has been developed and to whom it is delivered.
The Developer (“_NXCORE”)	_NXCORE, represented by Nicolas Chami — the party that designed, engineered and delivered the Software.

The Developer has designed, built and delivered to the Client a complete delivery & logistics management platform known as **iDeliver III** (the “**Software**” or the “**System**”), comprising the four modules described in Sections 4–7. The Software was **delivered to and installed for the Client on 01 June 2026** (the “**Delivery Date**”), which is also the Effective Date of this Agreement. This Agreement records, in full, **what the Software does and delivers** as of the Effective Date, so that both parties share a single, agreed definition of the delivered scope (the “**Scope Baseline**”). Anything not expressly listed in this Agreement is outside the Scope Baseline and is governed by the Change Control process in Section 9.

2. Definitions

- **Scope Baseline** — the complete set of features and capabilities described in Sections 3–7, representing the delivered System.
- **Module** — one of the four delivered applications: the Operations Console (Desktop), the Partners & Suppliers Portal, the Driver Application, and the Customer Mobile Application.
- **Change Request (CR)** — any request for a feature, behaviour, integration or modification not expressly included in the Scope Baseline.
- **Defect** — a verifiable failure of a Scope Baseline feature to operate as described in this Agreement.
- **Enhancement** — new or expanded functionality beyond the Scope Baseline; always treated as a Change Request.

- **Acceptance** — the Client's confirmation (Section 8) that the delivered System matches this Agreement.

3. The Delivered System — Overview & Architecture

iDeliver III is an integrated, multi-user platform that manages the full lifecycle of a delivery business: from taking an order, through dispatch and driver assignment, delivery, cash collection, and final financial reconciliation. It is delivered as **four connected applications** sharing a single secure database:

MODULE A Operations Console & Call Center — the desktop back-office application used by staff.

MODULE B Partners & Suppliers Portal — a restricted view for external partners/suppliers.

MODULE C Driver Application — the field app drivers use on delivery.

MODULE D Customer Mobile Application — the app end-customers use to book & track.

Technical foundation

- **Desktop application** packaged for Windows (and buildable for macOS / Linux), installable on office workstations.
- **Secure cloud database & backend** with role-based access control and row-level security, so every user sees only the data their role permits.
- **Real-time shared data** — orders, drivers, payments and messages are synchronised across all four modules.
- **Roles supported:** Super-Administrator (Developer), Administrator, Office/Call-Center user, Partner, Supplier, Driver, and Customer.
- **Multi-currency** handling of order totals and collections; **interactive maps** for locations & tracking; built-in **PDF/report** generation.
- **Security:** individual user accounts, enforced password change on first login / after reset, and administrator-managed account provisioning.

4. Module A — Operations Console & Call Center (Desktop)

The desktop application is the operational heart of the business — the **Call Center** and back-office console. It includes the following delivered capabilities:

Dispatch & Order Management (Call Center)

- Live **Dashboard** with real-time stats: available drivers, orders in transit, pending, failed / cancelled.
- Order composition: **goods/items, services, packages, and returnable items** on a single order.
- **Closed Orders** screen with Outlook-style date grouping for historical review.
- Customer quick-search / combobox for fast order entry at the call center.
- **Order intake & management** — create and edit delivery orders with customer, addresses and instructions.
- **Driver assignment** and status progression (pending → in transit → delivered / failed / cancelled).
- **Location tagging** and pickup / drop-off addresses with map selection.
- **Free-order** and **credit-order** handling (orders that close without immediate payment).

Live Tracking & Drivers

- **Map-based tracking** of orders and delivery locations.
- **Vehicles** register linked to the fleet.
- **Drivers register** — manage drivers, availability and assignment.
- Driver availability reflected live on the dashboard.

Cash, Payments & Financial Reconciliation

- **Money lifecycle:** driver collects cash → Driver Settlements → Cashier Box, fully tracked end-to-end.
- **Cashier Box** — the office cash ledger with a reversible **reset checkpoint**.
- **Partner Dues** — per-partner package balances and settlement.
- **Driver Settlements** — reconcile cash owed by each driver and mark it paid to the office.
- **Credit Customers** — account-level dues, collection and printable statements.
- **Multi-currency** totals and collections throughout.

Catalog, Purchasing & Retail

- **Products** catalog with automatic serial coding by kind (PRD / SRV / RTN / ADD) and service flagging.
- **Returnable Items** tracking.
- **Retail Invoices** (point-of-sale style sales).
- **Price List** management.
- **Purchase Invoices** (procurement).
- **Supplier Settlements** — procurement commission & month-end supplier reports.

Contacts & Accounting

- **Contacts** managed as Customers, Suppliers and Partners.
- **Chart-of-Accounts** sub-account numbers per contact.
- **Company profile** and **Reports** with charts & analytics.
- Multiple **addresses per contact** with interactive map picker.
- **Account Statements** and **Account Transactions** ledgers.
- On-screen and **PDF-exportable** statements & reports.

Communication & Administration

- **Broadcast Messages** — send announcements to users, with per-user unread indicators & pop-ups.
- Enforced **first-login / post-reset password change**.
- **User Accounts** administration — create users, assign roles, reset passwords.
- **App Settings** and company configuration.

Super-Administrator (Developer) Tools

- **Developer Account** management (restricted).
- **Reset Cashier Box** — reversible checkpoint that hides movements as of a date without deleting.
- **Delete Order** and **Delete Orders by Date** (bulk, selective, super-admin only).
- **Reset Data** and controlled maintenance operations.

Note. The features above constitute the delivered Operations Console in full. Screen-by-screen behaviour, layout and wording are as installed on the Effective Date and form part of the Scope Baseline.

5. Module B — Partners & Suppliers Portal

A dedicated, **restricted** experience for external Partners and Suppliers. When a partner or supplier signs in, they are placed in their own portal and never see the full back-office application.

Partner / Supplier Portal capabilities

- Access **scoped to their own contact only** — they see nothing that belongs to other parties.
- **Supplier commission** tracking and month-end **settlement** reporting.
- Separate, secure login governed by the same role & security model.
- Visibility limited to their **Sold Orders** and **Completed Orders**.
- **Partner package dues** — balances of packages handled on their behalf.
- No access to dispatch, cashier, catalog, admin or other customers' data.

6. Module C — Driver Application

An external application for delivery drivers in the field, connected to the same live system. It is the first hop of the cash lifecycle and keeps delivery status current for the whole operation.

Driver Application capabilities

- Drivers see the orders **assigned to them** for delivery.
- **Record cash collected** from the customer on delivery, attributed to the driver.
- Access limited strictly to the driver's own assignments and collections.
- **Update delivery status** (e.g. delivered / failed) from the field, reflected instantly in the office.
- Collections flow automatically into **Driver Settlements** for office reconciliation.
- Keeps the office **Tracking** and **Dashboard** up to date in real time.

7. Module D — Customer Mobile Application

A customer-facing mobile application allowing end-customers to register, book deliveries, and track their orders.

Customer Mobile capabilities

- **Multi-language** interface: English, Arabic (with right-to-left layout), French and Romanian.
- **Home** screen with quick actions and recent activity.
- **Saved addresses** with map-based location selection; delivery / drop and pickup points.
- **My Orders** — list, view details, and edit pending requests.
- **Notifications** & broadcast messages from the operator.
- **Registration** and secure sign-in, including one-time-passcode (OTP) and Google sign-in.
- **Book Delivery** — create a delivery/collection request with one or more request lines.
- **Payment preference** — cash on delivery or credit/debit, where allowed.
- **Live delivery status** per order (awaiting pickup, in progress, delivered).
- **Profile** management (details, addresses, language, password).

Integration. Customer-created requests arrive directly in the Operations Console as external requests, ready for the call center to dispatch — closing the loop across all four modules.

8. Scope Baseline & Acceptance

1. **Definition of delivered scope.** The features and capabilities described in Sections 3–7 constitute the complete Scope Baseline — the entirety of what the Developer has agreed to deliver under this Agreement. The Client confirms that this document accurately and fully describes the delivered System.
2. **Acceptance.** Upon signature, the Client accepts the System as delivered and matching this Agreement. Any item the Client believes to be missing from the delivered System must be raised in writing within **fifteen (15)** days of signature; otherwise the System is deemed fully accepted.
3. **Completeness.** Both parties agree that the Scope Baseline is **complete and self-contained**. It is not an open-ended commitment to continuous additions. Any capability, screen, report, integration, automation or behavioural change **not expressly listed** in Sections 3–7 is outside the Scope Baseline.

9. Change Control & Additional Work

Purpose of this section. To keep the project stable and fairly priced for both parties, all new ideas, additions and modifications after Acceptance are handled through a single, written Change Control process. Verbal or ad-hoc requests do not create an obligation on the Developer and are not part of the delivered scope.

1. **Everything new is a Change Request.** Any request that adds to, expands, or alters the Scope Baseline — including new screens, fields, reports, rules, integrations, third-party services, redesigns, or additional modules — is an **Enhancement** and is handled as a **Change Request (CR)**, separate from this Agreement.
2. **How a Change Request is raised.** The Client submits the request in writing (email is sufficient). The Developer responds with a written **impact assessment**: description, effort/time estimate, price, and any effect on other features or timelines.
3. **Approval before work.** The Developer begins work on a CR only after the Client approves the written estimate and price. No approved estimate, no work — and no expectation of delivery.
4. **Pricing of changes.** Change Requests are billed either at an hourly rate of **USD 25.00 per hour** or, where the scope allows, at a **fixed price per CR** quoted in advance, and are **not** included in any support or maintenance fee unless expressly agreed in writing.
5. **Bug fixes are not Change Requests.** A genuine **Defect** — a Scope Baseline feature failing to work as described in this Agreement — is corrected under Section 10 and is not charged as a CR.
6. **Distinguishing defects from changes.** A request to make a feature behave *differently* than described here (rather than fixing a failure to meet this description) is a Change Request, not a Defect.
7. **Batching & scheduling.** To keep the System stable, the Developer may schedule approved changes into planned releases rather than delivering each request immediately.

10. Support, Maintenance & Hosting

1. **Warranty & Defect support.** The Developer will correct verified Defects in the Scope Baseline for a warranty period of **ninety (90) days from the Delivery Date (01 June 2026), i.e. until 30 August 2026**, at no additional charge.
2. **Maintenance (optional).** After the warranty period, ongoing maintenance — minor adjustments, updates, database upkeep and priority support — may be provided under a separate annual maintenance arrangement at **USD 600.00 per year** (payable annually in advance, equivalent to USD 50.00 per month). Maintenance does not include Enhancements (Section 9), which are quoted separately.
3. **Hosting & third-party services.** The System relies on cloud database, mapping and authentication services. Their subscription / usage fees are the **Client's** responsibility, currently estimated at **USD 25.00 – USD 120.00 per month** depending on usage volume; the Developer will configure and maintain these services on the Client's behalf.
4. **Backups & data.** During the warranty period and any active maintenance arrangement, the Developer performs **automated daily database backups, retained for thirty (30) days**. The Client remains responsible for exporting and retaining its own operational records (statements, reports and invoices) for its long-term needs.
5. **Response targets (developer's mandatory service levels).** For issues reported in writing (email is sufficient), the Developer will use reasonable endeavours to meet the following times, counted in Beirut business days:
 1. **Critical** (System unusable / operations stopped): acknowledge within **one (1) business day** and provide a fix or workaround within **three (3) business days**.
 2. **Major** (a key feature failing, workaround exists): acknowledge within **two (2) business days** and resolve within **seven (7) business days**.
 3. **Minor** (cosmetic or low-impact): addressed in the next scheduled maintenance release.
6. **Support hours.** Standard support is provided **Monday to Friday, 09:00–17:00 (Beirut time)**, excluding official Lebanese public holidays.

11. Intellectual Property & Licence

1. **Ownership.** All intellectual property, source code, design and know-how in iDeliver III remain the property of **_NXCORE** unless a separate written assignment states otherwise.
2. **Licence to the Client.** The Developer grants 3asari3 a non-exclusive, non-transferable licence to use the System for its own delivery business operations for the duration of this engagement.
3. **Branding.** The System is delivered by **_NXCORE** and may carry a discreet “Powered by **_NXCORE**” attribution.
4. **Restrictions.** The Client shall not resell, sublicense, copy or redistribute the Software, nor commission a third party to modify it, without the Developer's written consent.

12. Warranties, Liability & General Terms

1. **Warranty.** The Developer warrants that the System substantially performs the functions described in this Agreement. Except as stated, the System is provided “as is” without further warranty.
2. **Limitation of liability.** The Developer's total liability under this Agreement shall not exceed the fees paid by the Client for the delivered System. Neither party is liable for indirect or consequential loss.
3. **Client responsibilities.** Timely feedback, access, test data, and payment of approved fees.
4. **Entire agreement.** This document is the entire agreement on the delivered scope and supersedes prior verbal discussions and informal feature requests.
5. **Amendments.** Any amendment must be in writing and signed by both parties.
6. **Governing law.** This Agreement is governed by and construed in accordance with the laws of the **Lebanese Republic (Lebanon)**, and any dispute arising out of or in connection with it shall be resolved by the **competent courts of Beirut, Lebanon**.

13. Signatures

By signing below, the parties confirm that they have read, understood and agree to this Software Scope & Service Agreement in its entirety, and acknowledge the Scope Baseline (Sections 3–7) as the complete delivered System.

For the Client — 3asari3

For the Developer — _NXCORE
