CASH COLLECTED

USD 107,878.73

93.94% of what was charged

THE FINDING

The operation is viable on its own revenue. In 54 days it moved 6,301 orders — 116.69 a day — and kept **USD 33,784.85** of the USD 114,842.37 it handled. That is **USD 19,044.65 a month**, or USD 228,360.56 annualised at the current run-rate, against a platform cost of USD 600 a year: the software is **0.26%** of revenue.

The business breaks even while the all-in cost of making a delivery stays under **USD 5.36**. At 13 active drivers each completing about 8.88 deliveries a day, that is the number to manage.

ORDERS PER DAY

WHERE THE WORK COMES FROM

Call centre		6,041
Partner		230
Customer app		30

The call centre still raises 95.87% of all orders. The customer app and the partner portal together account for 4.13% — the growth room.

MONTH ON MONTH

MONTH	DAYS	ORDERS	ORDERS/DAY	REVENUE/DAY
2026-07	31	3,527	113.77	611.67
2026-08	23	2,774	120.61	637.46

August is running **6.01%** ahead of July on orders per day and **4.22%** ahead on revenue per day, on 23 days of trading.

Volume, revenue and what the business actually keeps

REVENUE PER DAY (USD EQUIVALENT)

MONEY HANDLED VERSUS MONEY KEPT

Goods & packages handled		81,436
Delivery fees charged		33,407
Cash collected		107,879
Our revenue kept		33,785

Most of what the business touches is not its own. Goods and packages worth **USD 81,435.71** passed through in 54 days; the delivery fees on top of them — **USD 33,406.66** — are what the business earns for moving them, together with USD 216.85 of shop commission and USD 161.34 of advertising. Reading the handled figure as turnover would overstate the business by **3.40x**.

REVENUE LINE	USD	SHARE	WHAT IT IS
Delivery fees	33,406.66	98.88%	Charged per order for the delivery itself
Shop commission	216.85	0.64%	Earned on goods bought on a customer's behalf
Advertising	161.34	0.48%	Story placements sold to partners
Total	33,784.85	100.00%	USD 5.36 per order

One line is not being collected. Of USD 216.85 of commission earned on procurement invoices, only **USD 3.41** — 1.57% — has been marked collected. It is small against fees today, but it is the line that grows with the shop module, and an uncollected commission is indistinguishable from one that was never charged.

FEE COVERAGE

6,044 of 6,301 orders carry a delivery fee. The remaining **257** (4.08%) went out with none — free deliveries, waived charges, or a fee left blank at entry. At the average of USD 5.36 that is **USD 1,377.52** of foregone revenue over 54 days.

Revenue counts what the business keeps. Goods, packages and shop invoices are customers' money in transit and are excluded.

Cash, collection and the customer base

WHO HOLDS THE MONEY

Drivers collected **USD 105,437.57** of the USD 107,878.73 taken in — about **USD 150.20 per driver per day** in hand. That is the single largest operational risk in the model, and the reason the driver-dues and cashier-box controls exist.

COLLECTION PERFORMANCE

MEASURE	USD
Charged (goods + fees)	114,842.37
Collected	107,878.73
Collection rate	93.94%
Outstanding	6,963.64

A 93.94% collection rate on cash-on-delivery is the number that makes this business fundable: the working-capital cycle is days, not months, and there is no receivables book to speak of beyond the credit customers.

THE CUSTOMER BASE

CUSTOMERS SERVED

1,278

4.93 orders each

CAME BACK

49.77%

636 of 1,278

ORDERS FROM REPEATS

89.81%

5,659 orders

TOP-10 CONCENTRATION

25.38%

of all orders

Half the customers came back, and they bring nine orders in ten. A delivery business lives or dies on that ratio: acquiring 1,278 customers is a cost paid once, and 89.81% of the volume since has come from customers already won. The counterweight is concentration — the ten largest accounts alone are 25.38% of orders, so losing two or three of them would be felt immediately.

BUSIEST ACCOUNTS

PTN-000011	398
PTN-000057	257
CST-000588	185
CST-000055	147
CST-000062	146
PTN-000007	128

BUSIEST PARTNERS (PACKAGES)

PTN-000011	399
PTN-000007	128
PTN-000023	47
PTN-000013	42
PTN-000009	37
PTN-000022	30

65 partners handed us 938 packages in the period.

Capacity, cost and the break-even

FLEET

DRIVERS USED 13 of 15 on file	DELIVERIES / DRIVER / DAY 8.88 across 54 days	REVENUE / DRIVER / DAY USD 48.13 before driver cost	CASH / DRIVER / DAY USD 150.20 held before settlement
--	--	--	--

Ahmad Bader		748
Fahed Ismaili		692
Aabass Diab		690
Mosaab Chouaab		662
Yaeel Khadour		627
Wassim Lcheikh		615
Fahed Fawaz		547
Nassim Slaymen		456

Work is spread unevenly: the busiest driver carries 11.87% of all deliveries while the quietest of the eight carries 7.24%. Levelling that is capacity that already exists and is not being used.

WHAT THE DATABASE CANNOT TELL US

The software records every order, fee and collection, so the revenue side of this study is measured, not estimated. It does not record **what the operation costs** — driver pay, fuel, phones, rent, office salaries. Rather than invent a figure, the table below models profit across a range of driver costs and office overheads. The only cost the system does know is the platform itself: **USD 600 a year**, or USD 88.77 for this period — 0.26% of revenue.

MONTHLY PROFIT AT 3,552 ORDERS / MONTH · REVENUE USD 19,044.65

DRIVER COST	FLEET / MONTH	NO OVERHEAD	+ USD 500	+ USD 1,000	+ USD 1,500	BREAK-EVEN ORDERS
USD 20 / driver / day	6,760	12,235	11,735	11,235	10,735	1,271
USD 25 / driver / day	8,450	10,545	10,045	9,545	9,045	1,586
USD 30 / driver / day	10,140	8,855	8,355	7,855	7,355	1,901
USD 35 / driver / day	11,830	7,165	6,665	6,165	5,665	2,216
USD 40 / driver / day	13,520	5,475	4,975	4,475	3,975	2,532

The operation clears its costs across every case modelled. Even at USD 40 per driver per day with USD 1,500 of monthly office overhead, the month closes at **USD 3,974.65**. The margin comes from volume the fleet is already carrying, not from a price rise: 8.88 deliveries per driver per day at USD 5.36 each.

Fleet cost assumes 13 drivers working 26 days a month. Break-even orders = the volume that covers fleet and platform cost alone.

What to watch, and how this was measured

RISKS THE DATA ITSELF SHOWS

RISK	WHAT THE DATA SAYS	WHAT IT MEANS
Cash held by drivers	USD 105,437.57 collected in the field, 97.74% of all cash	About USD 150.20 per driver per day in hand before settlement. Daily reconciliation is not administration here; it is the control.
Customer concentration	Top 10 accounts = 25.38% of orders	Losing two or three large accounts would show up in the week it happened. Widening the base matters more than raising the fee.
One channel	95.87% of orders still come through the call centre	Every order costs staff time to key in. The customer app and partner portal are the only routes that scale without adding staff.
Commission not collected	1.57% of USD 216.85 earned	A small line today, but the one that grows with the shop module. Uncollected is indistinguishable from never charged.
Free deliveries	257 orders (4.08%) carry no fee	Worth about USD 1,377.52 over 54 days. Deliberate or not, it should be a decision rather than a default.
Currency	Both USD and LBP in daily use	This study converts at 89,500 LBP/USD. A 10% move in the rate moves the reported revenue materially — every LBP figure should be read with that in mind.

WHAT WOULD MOVE THE NUMBERS MOST

1. **Level the fleet.** The busiest driver does several times the work of the quietest. Bringing the bottom half up to the median is capacity already paid for.
2. **Move orders off the call centre.** 4.13% of orders arrive through the app or the portal today. Every point moved is staff time returned.
3. **Collect the commission.** 98.43% of it is still outstanding; the mechanism exists and is not being used.
4. **Decide the free deliveries.** 4.08% of orders carry no fee — worth roughly USD 776.51 a month.

METHOD

Every figure was read directly from the operating database on 23/08/2026, covering orders created between 01/07/2026 and 23/08/2026 inclusive — 54 days. 6,301 orders were examined, together with 938 packages, the retail invoices raised against them, and 5,965 payment collections. No sampling, and no projection except where a line is explicitly labelled as annualised or a per-month run-rate.

Revenue means what the business keeps: delivery fees, shop commission and advertising. Goods, packages and shop invoices are customers' money in transit and are excluded from it — they appear only as "handled". **Cancelled and failed orders** are excluded from volume and revenue. **LBP** is converted at 89,500 LBP/USD, stated here because the system does not store a rate; every LBP-denominated figure in this study depends on it. **Costs** other than the platform subscription are not recorded by the system and are modelled as a range rather than asserted.
